DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-37, drawn to a light beam detection system, classified in class 600, subclass 476.
- II. Claims 38-47, drawn to an image detection system, classified in class 356, subclass 451.
- III. Claims 48-56, drawn to an imaging system, classified in class 600, subclass 407.
- IV. Claims 57-73, drawn to method of light detection, classified in class 250, subclass 508.
- V. Claims 74-77, drawn to a method of providing an image, classified in class 250, subclass 582.
- VI. Claims 78-84, drawn to a system for detection, classified in class 250, subclass 318.
- VII. Claim 85, drawn to a system for imaging, classified in class 600, subclass 407.
- VIII. Claims 86-90, drawn to a method of detection, classified in class 250, subclass 580.
- IX. Claim 91, drawn to a method of providing an image, classified in class 600, subclass 407.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 3742

Inventions Group II and both Groups I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination has no beam splitter and can not provide a plurality of images. The subcombinations have separate utilities such as a light detector and a imaging system.

Inventions Group VI and Group I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not have a light detector. The subcombination has separate utility such as a light detector.

Inventions Group VIII and Groups I, II and VI are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced with or without a light detector.

Inventions Groups V and IX and Groups III nad VII are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as

Art Unit: 3742

claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can practice another and materially different process such as providing a plurality of images with or without a plurality of detectors.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Joshua King on 3-10-2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
